Statement of Wireless LAN Function Disable

Product: Mobile phone
Model No.: F-08D
FCC ID: VQK-F08D

Channels 12 and 13

The above device (mobile phone) has capability of Channels 12 and 13. These functions cannot be activated by the user in case the mobile phone is used or switched on in the United States. These channel disable based upon PCS 1900 and W-CDMA Band V Mobile Country Code (MCC) checking. Channels 12 and 13 are not activated when mobile phone switched on in the United States or mobile phone switched on outside service area. In both cases these functions are also not activated automatically.

When the mobile phone is inside the service area of a network, it will search all available networks. These functions will not switch on automatically unless mobile phone detects networks having Channels 12 and 13. Therefore these functions are never activated in the United States where there is no commercial network for those services. While searching for the network the mobile phone does not transmit any signal.

Also, the user access to all functions related to Channels 12 and 13 will be disabled where it cannot detect networks having those services and this prevents the user from manually switching on these functions.

In case you have any question, please contact us,
