FCC DFS Test Report

FCC ID : VQK-F07E

Equipment : Mobile Phone

Model No. : F-07E

Brand Name : Xi

Applicant : FUJITSU LIMITED

Address : 1-1, Kamikodanaka 4-chome, Nakahara-ku,

Kawasaki 211-8588, Japan

Standard : 47 CFR FCC Part 15.407

Received Date : Apr. 09, 2013 Tested Date : May 21, 2013

Operating Mode : Client without ad hoc and radar detection

We, International Certification Corp., would like to declare that the tested sample has been evaluated and in compliance with the requirement of the above standards. The test results contained in this report refer exclusively to the product. It may be duplicated completely for legal use with the approval of the applicant. It shall not be reproduced except in full without the written approval of our laboratory.

| Combiner(1x4) | MCLI | PS4-14 | 24939 | | 2012/12/24 | 2013/12/23 | DF01-WS |

1.5 Testing Condition

| Test Item | Test Site | Ambient Condition | Tested By |
|-----------|-----------|-------------------|------------|
| DFS | DF01-WS | 22.8°C / 72% | Alex Huang |

1.6 Test Standards

According to the specification of EUT, the EUT must comply with following standards and KDB documents.

47 CFR FCC Part 15.407

FCC 06-96 A1

Report No.: FZ331905 Page: 6 of 14

2 Technical Requirements for DFS

2.1 Applicability of DFS Requirements

2.1.1 Applicability of DFS Requirements Prior to use of a Channel

| | Operational Mode | | | |
|---------------------------------|------------------|-----------------------------------|--------------------------------|--|
| Requirement | Master | Client Without Radar Detection | Client With Radar Detection | |
| Non-Occupancy Period | Yes | Not required | Yes | |
| DFS Detection Threshold | Yes | Not required | Yes | |
| Channel Availability Check Time | Yes | Not required | Not required | |
| Uniform Spreading | Yes | Not required | Not required | |
| U-NII Detection Bandwidth | Yes | Not required | Yes | |

2.1.2 Applicability of DFS Requirements during Normal Operation

| | Operational Mode | | | |
|-----------------------------------|------------------|-----------------------------------|--------------------------------|--|
| Requirement | Master | Client Without Radar Detection | Client With Radar Detection | |
| DFS Detection Threshold | Yes | Not required | Yes | |
| Channel Closing Transmission Time | Yes | Yes | Yes | |
| Channel Move Time | Yes | Yes | Yes | |
| U-NII Detection Bandwidth | Yes | Not required | Yes | |

Report No.: FZ331905 Page: 7 of 14

2.2 DFS Detection Thresholds and Response Requirement

Below table provides the DFS Detection Thresholds for Master Devices as well as Client Devices incorporating In-Service Monitoring.

DFS Detection Thresholds for Master Devices and Client Devices With Radar Detection.

| Maximum Transmit Power | Value (See Notes 1 and 2) |
|------------------------|---------------------------|
| ≥ 200 milliwatt | -64 dBm |
| < 200 milliwatt | -62 dBm |

Note:

- 1) This is the level at the input of the receiver assuming a 0 dBi receive antenna.
- 2) Throughout these test procedures an additional 1 dB has been added to the amplitude of the test transmission waveforms to account for variations in measurement equipment. This will ensure that the test signal is at or above the detection threshold level to trigger a DFS response.

DFS Response Requirement Values

| Parameter | Value | | | | |
|-----------------------------------|--|--|--|--|--|
| Non-occupancy period | Minimum 30 minutes. | | | | |
| Channel Availability CheckTime | 60 seconds. | | | | |
| Channel Move Time | 10 seconds. (See Note 1.) | | | | |
| Channel Closing Transmission Time | 200 milliseconds + an aggregate of 60 milliseconds over remaining 10 second period. (See Notes 1 and 2.) | | | | |
| U-NII Detection Bandwidth | Minimum 80% of the U- NII 99% transmission power bandwidth. (See Note 3.) | | | | |

Note:

- 1) The instant that the Channel Move Time and the Channel Closing Transmission Time begins is as follows:
 - For the Short Pulse Radar Test Signals this instant is the end of the Burst.
 - For the Frequency Hopping radar Test Signal, this instant is the end of the last radar Burst generated.
 - For the Long Pulse Radar Test Signal this instant is the end of the 12 second period defining the Radar Waveform.
- 2) The Channel Closing Transmission Time is comprised of 200 milliseconds starting at the beginning of the Channel Move Time plus any additional intermittent control signals required to facilitate a Channel move (an aggregate of 60 milliseconds) during the remainder of the 10 second period. The aggregate duration of control signals will not count quiet periods in between transmissions.
- 3) During the U-NII Detection Bandwidth detection test, radar type 1 is used and for each frequency step the minimum percentage of detection is 90 percent. Measurements are performed with no data traffic.

2.3 Radar Test Waveforms

This section provides the parameters for required test waveforms, minimum percentage of successful detections, and the minimum number of trials that must be used for determining DFS conformance. Step intervals of 0.1 microsecond for Pulse Width, 1 microsecond for PRI, 1 MHz for chirp width and 1 for the number of pulses will be utilized for the random determination of specific test waveforms.

2.3.1 Short Pulse Radar Test Waveforms

| Radar Type | Pulse Width (µsec) | PRI (μsec) | Number of Pulses | Minimum Percentage of Successful Detection | Minimum Number of Trials |
|---------------|-----------------------|------------|---------------------|--|-----------------------------|
| 1 | 1 | 1428 | 18 | 60% | 30 |
| 2 | 1-5 | 150-230 | 23-29 | 60% | 30 |
| 3 | 6-10 | 200-500 | 16-18 | 60% | 30 |
| 4 | 11-20 | 200-500 | 12-16 | 60% | 30 |
| Aggregate | e (Radar Types 1-4) | 80% | 120 | | |

A minimum of 30 unique waveforms are required for each of the Short Pulse Radar Types 2 through 4. For Short Pulse Radar Type 1, the same waveform is used a minimum of 30 times. If more than 30 waveforms are used for Short Pulse Radar Types 2 through 4, then each additional waveform must also be unique and not repeated from the previous waveforms. The aggregate is the average of the percentage of successful detections of Short Pulse Radar Types 1-4.

2.3.2 Long Pulse Radar Test Waveform

| Radar Type | Pulse Width (µsec) | Chirp Width (MHz) | PRI (µsec) | Number of Pulses per Burst | Number of Bursts | Minimum Percentage of Successful Detection | Minimum Number of Trials |
|---------------|--------------------------|----------------------|------------|----------------------------------|---------------------|--|--------------------------------|
| 5 | 50-100 | 5-20 | 1000-2000 | 1-3 | 8-20 | 80% | 30 |

The parameters for this waveform are randomly chosen. Thirty unique waveforms are required for the Long Pulse Radar Type waveforms. If more than 30 waveforms are used for the Long Pulse Radar Type waveforms, then each additional waveform must also be unique and not repeated from the previous waveforms.

Report No.: FZ331905 Page: 9 of 14

No. 3-1, Lane 6, Wen San 3rd St., Kwei Shan Hsiang, Tao Yuan Hsien 333, Taiwan, R.O.C. Tel: 886-3-271-8666 Fax: 886-3-318-0155

2.3.3 Frequency Hopping Radar Test Waveform

| Radar Type | Pulse Width (µsec) | PRI (µsec) | Pulses per Hop | Hopping Rate (kHz) | Hopping Sequence Length (msec) | Minimum Percentage of Successful Detection | Minimum Number of Trials |
|---------------|--------------------------|------------|-------------------|-----------------------|---|--|--------------------------------|
| 6 | 1 | 333 | 9 | 0.333 | 300 | 70% | 30 |

For the Frequency Hopping Radar Type, the same Burst parameters are used for each waveform. The hopping sequence is different for each waveform and a 100-length segment is selected from the hopping sequence defined by the following algorithm

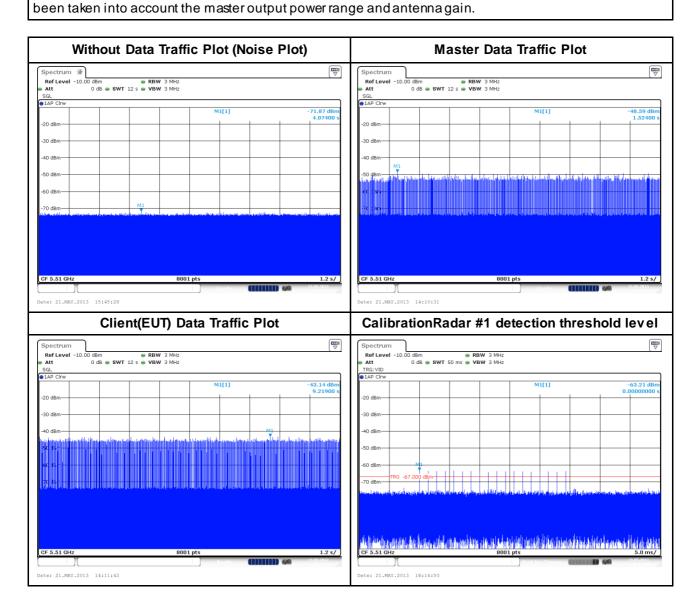

2.3.4 Radar waveform generation

A single R&S SMJ100A Vector Signal Generator is used for the DFS signal generation. This instrument is capable of generating all the above waveforms with Pulse Sequencer Software. The R&S Pulse Sequencer Software comes as a stand-alone PC based software with preconfigured project files for DFS. It simplifies the generation of all required waveforms and offers a one box solution

Report No.: FZ331905 Page: 10 of 14

2.3.5 Verify DFS Detection Threshold levels

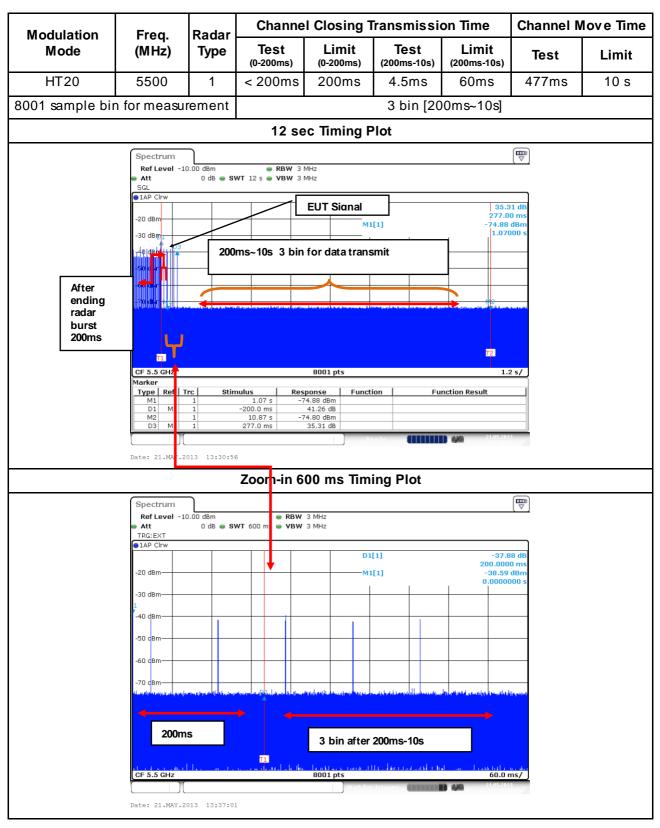

| Master DFS Threshold Level | | | | | | |
|--|---|--|--|--|--|--|
| DFS Threshold level: -63 dBm | × | at the antenna connector(-63 dBmconducted) | | | | |
| | | in front of the antenna(-63 dBm e.i.r.p.) | | | | |
| The Interference Radar Detection Threshold Level is (-64dBm) + (0 [dBi]) + {1 dB}= -63 dBm. That had | | | | | | |
