## Statement of GSM, W-CDMA, and LTE Function Disable

Product:   Mobile Phone
Model No.: F-04G
FCC ID: VQK-F04G

GSM900, DCS1800, W-CDMA Band I, VI, XIX, LTE Band 1, 3, 19, 21, 28, 38, 39.
The above device (mobile phone) has capability of GSM900, DCS1800, W-CDMA Band I, VI, XIX,
LTE Band 1, 3, 19, 21, 28, 38, 39. These functions cannot be activated by the user in case the mobile
phone is used or switched on in the United States. These functions can also not be activated by the user
in case the mobile phone is outside of the service area of a mobile phone network while switched on. In
both cases, these functions are also not activated automatically.

When the mobile phone is inside the service area of a mobile phone network, it will search all available
cellular networks. These functions will not switch on automatically unless mobile phone detects networks
having GSM900, DCS1800, W-CDMA Band I, VI, XIX, LTE Band1, 3, 19, 21, 28, 38, 39 or if the mobile
phone detect network having GSM850, PCS1900, W-CDMA Band V, LTE BAND 17. Therefore these
functions are never activated in the United States where there is no commercial network for those
services. While searching for the network the mobile phone does not transmit any signal.

Also, the user access to all functions related to GSM900, DCS1800, W-CDMA Band I, VI, XIX, LTE
Band1, 3, 19, 21, 28, 38, 39 will be disabled where it cannot detect networks having those services, or
where it can detect network having GSM850, PCS1900, W-CDMA Band V, LTE BAND 17 and this
prevents the user from manually switching on these functions.

In case you have any question, please contact us,
